

Windows Lightweight Virtual Machine User Manual

1. Installation

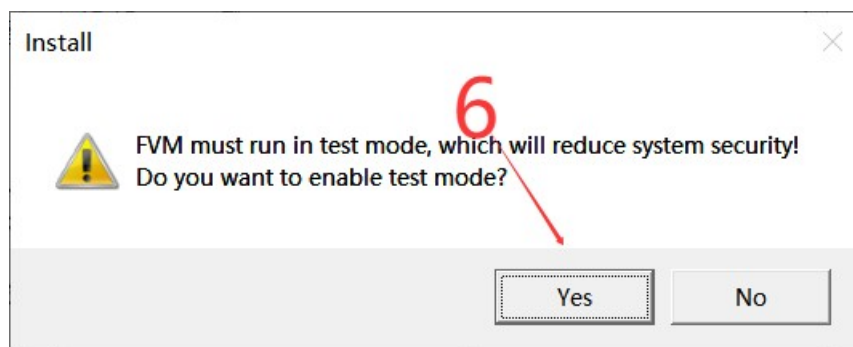

- Double-click the installation package(FrameInstall.exe)

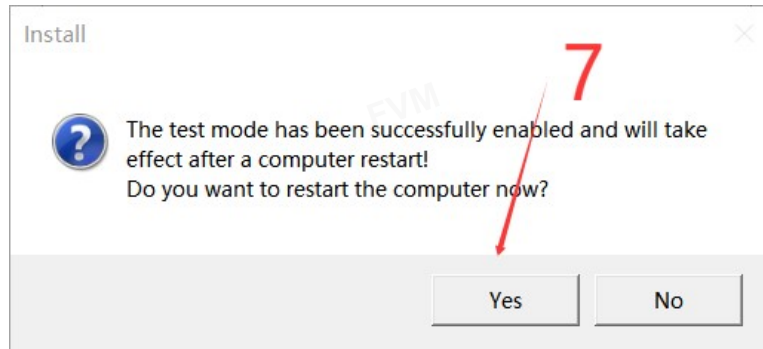

- Select installation path -->Read User Agreement and Privacy Policy -->Check to read and agree -->Click Install

- Turn on test mode and restart the computer (**Warning: Test mode may reduce system security, please consider carefully!**)

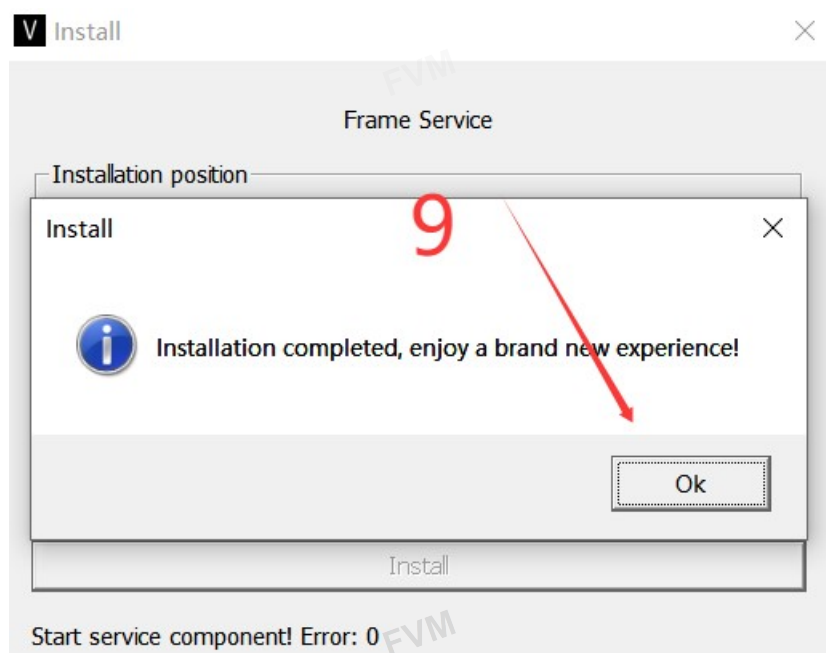

- After restarting the computer, please confirm if there is a watermark for test mode in the bottom right corner of the desktop

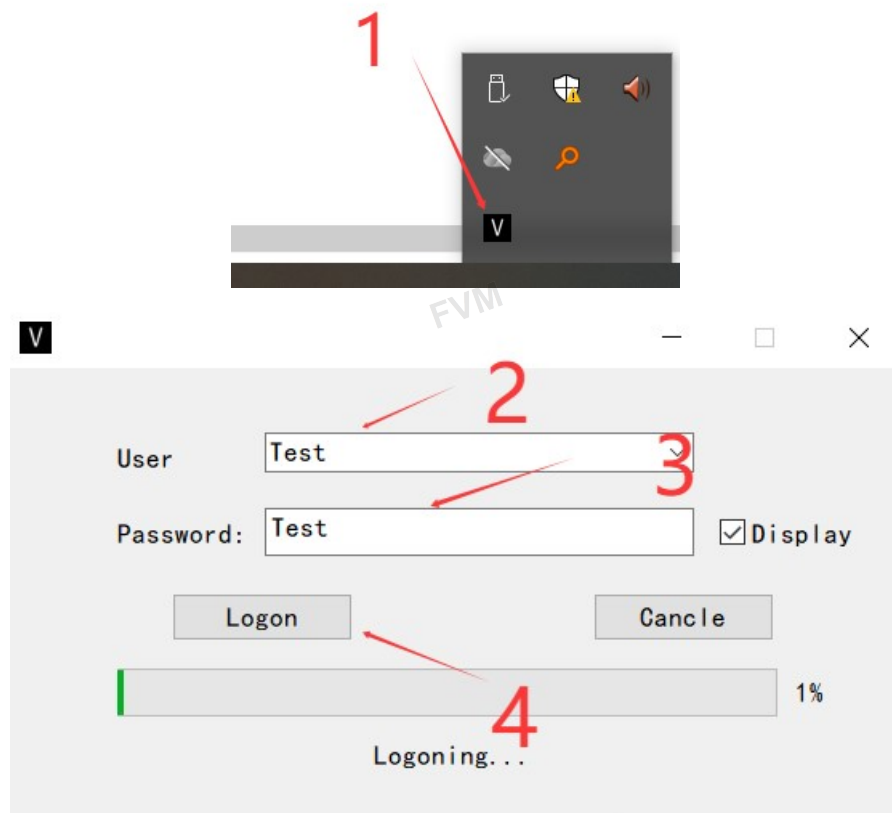

- Double click the installation package (FrameInstall.exe) again, follow steps 1, 2, 3, 4, and 5 to complete the installation

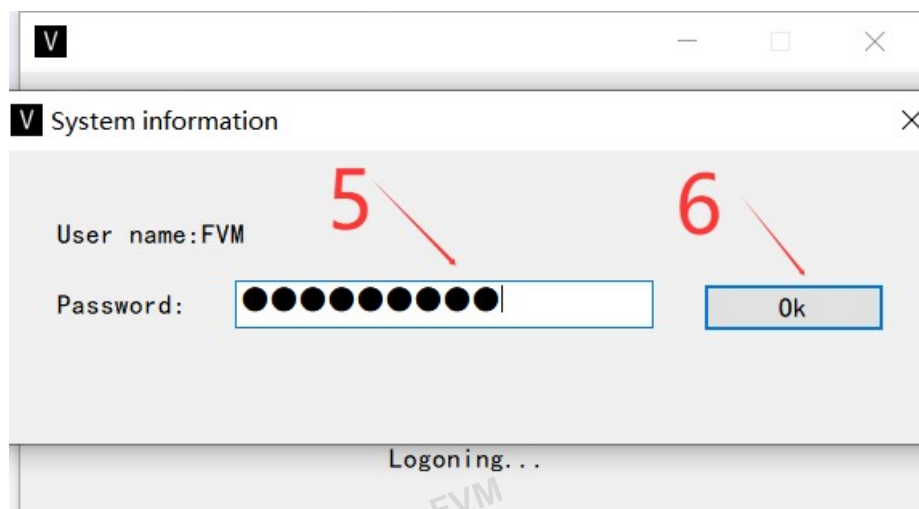

2. Logon

- Right click on FVM tray -->Click **Logon** -->Enter **User** (Test), **Password** (Test) --> Click **Logon**

- Enter the current user password (for internal FVM use only)

- Configure FVM user settings

V Setting

Name: G1

Storage directory: D:\ 222 G

Size: 5 G

Lang: en-us Prop: M

Ok

V Setting

Name: G2

Storage directory: D:\ 222 G

Size: 5 G

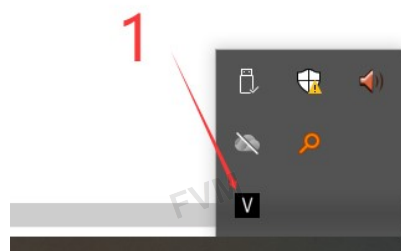

Lang: en-us Prop: M

Ok

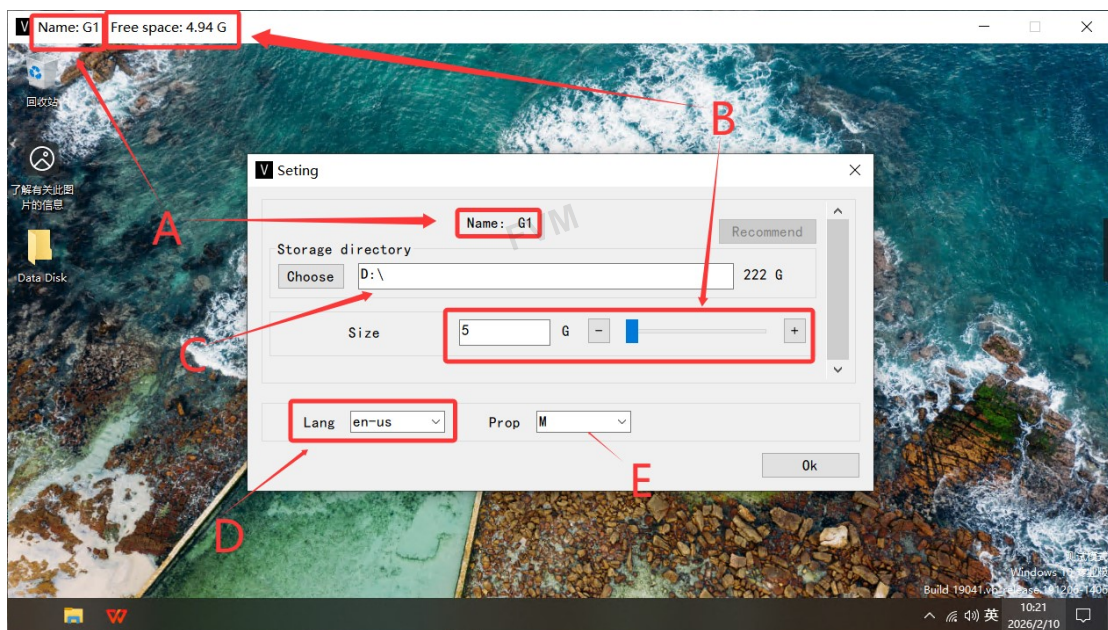

- Waiting for login to complete

3. Logoff、Restart、Seting

- Right click on the FVM tray -->click on **Logoff** or **Restart**

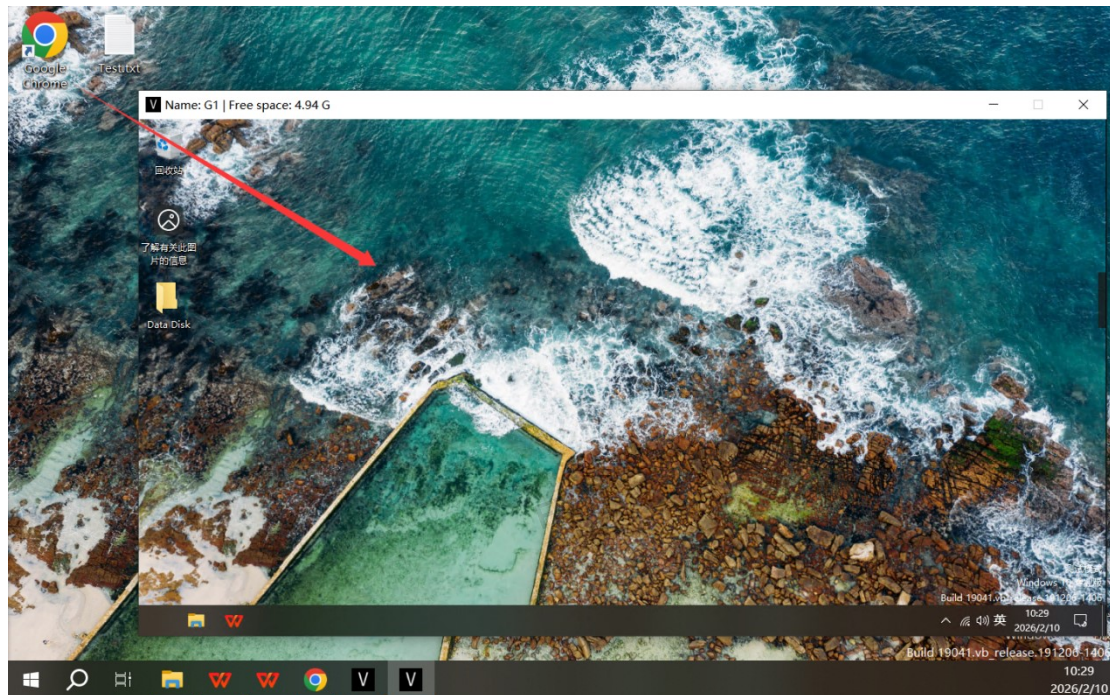

- Right click on the FVM tray -->click on **Setting**-->Modify the user configuration of the current client (effective after restarting FVM)
 - A: Current client name (G1)
 - B: When the free space of the current client (G1) is less than or equal to 2.00G, Should click + to increase the current storage space (5G)
 - C: Client (G1) storage directory
 - D: Current language, supports Chinese and English
 - E: The proportion of virtual machines relative to the current desktop (large, medium, small)

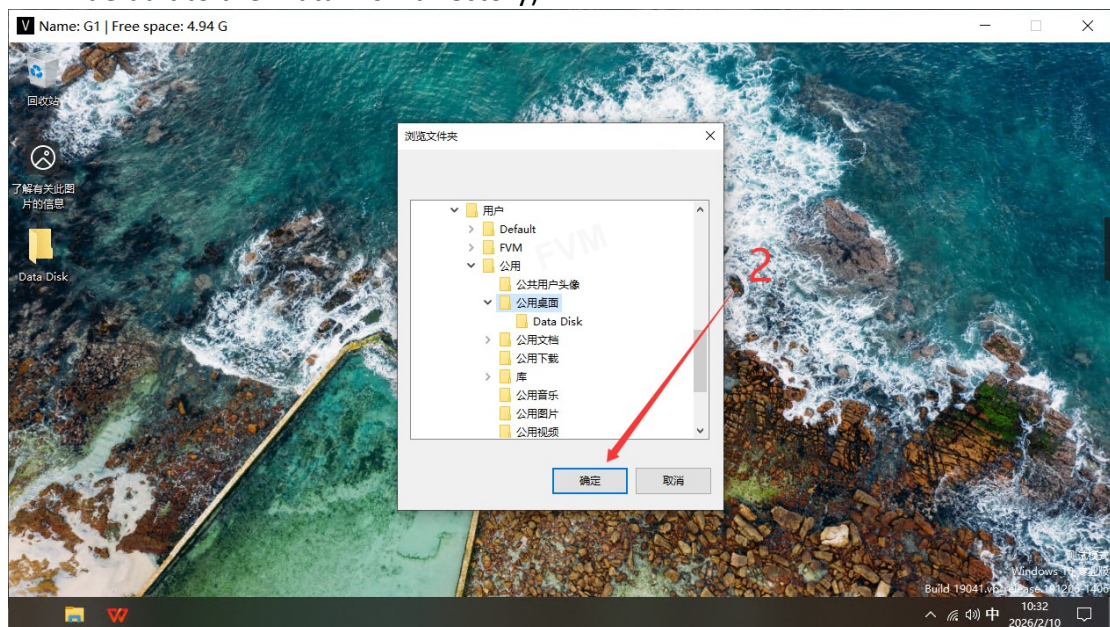

4. How to use software on the client machine

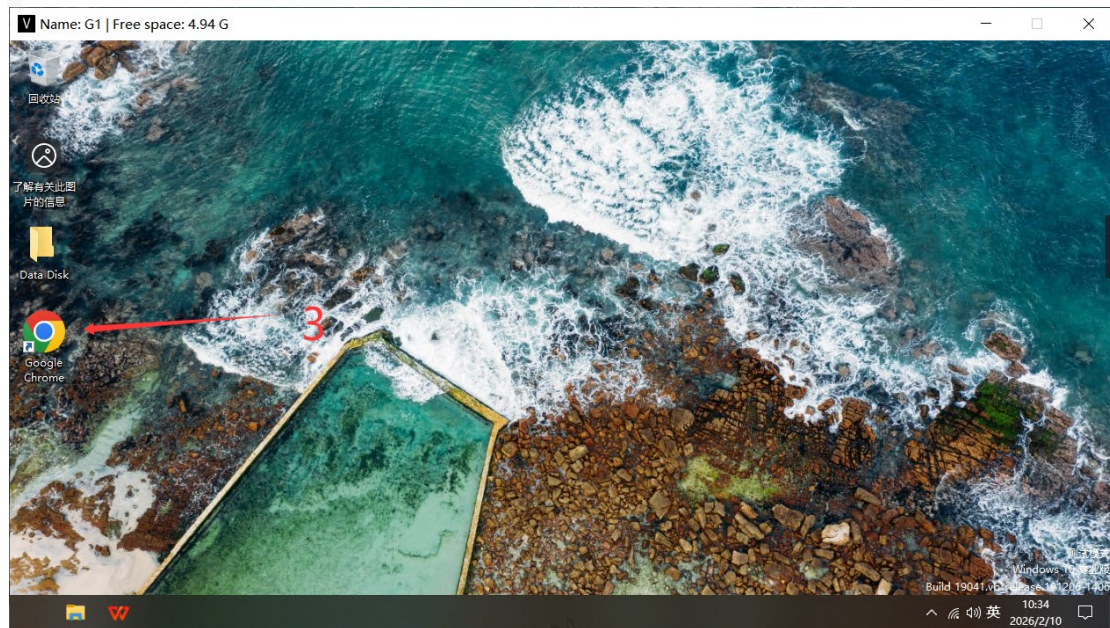

- Drag and drop the desired software shortcut (.lnk) or executable file (.exe) from the host to the client machine

- Select the storage directory ('.lnk' will default to the client desktop, and other files will default to the 'Data Disk' directory).

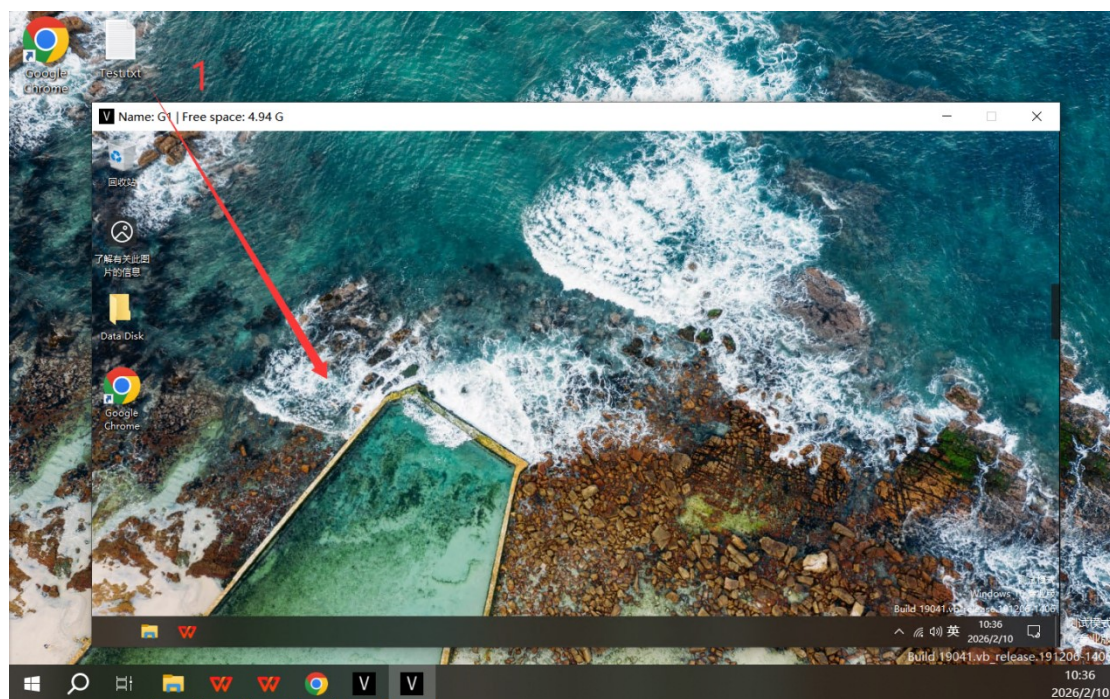

- Double click the software that needs to be run on the client machine

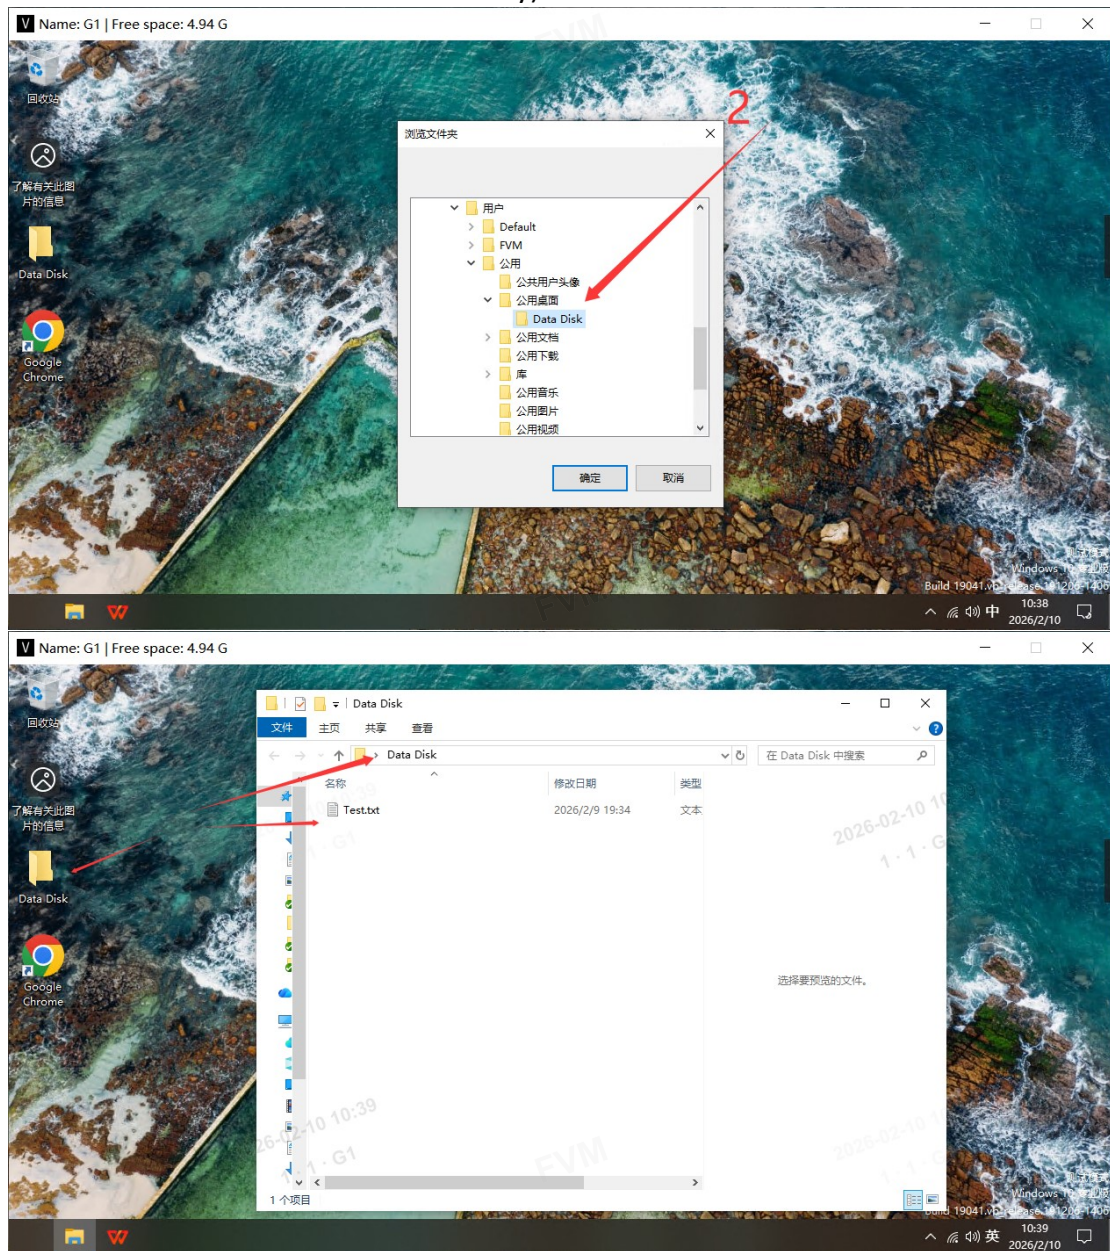

5. How to use host files on the client machine

- Dragging files from the host to the client machine

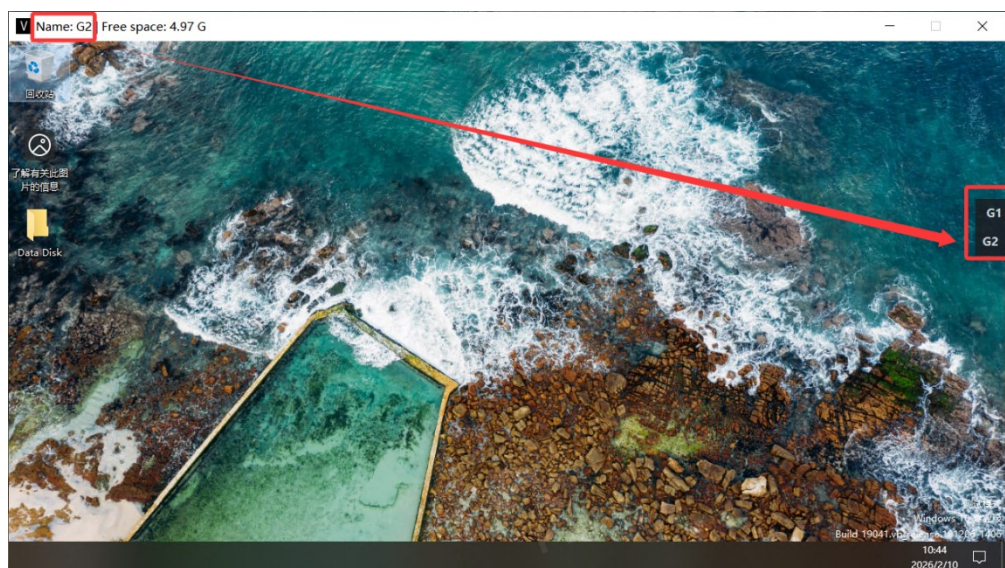

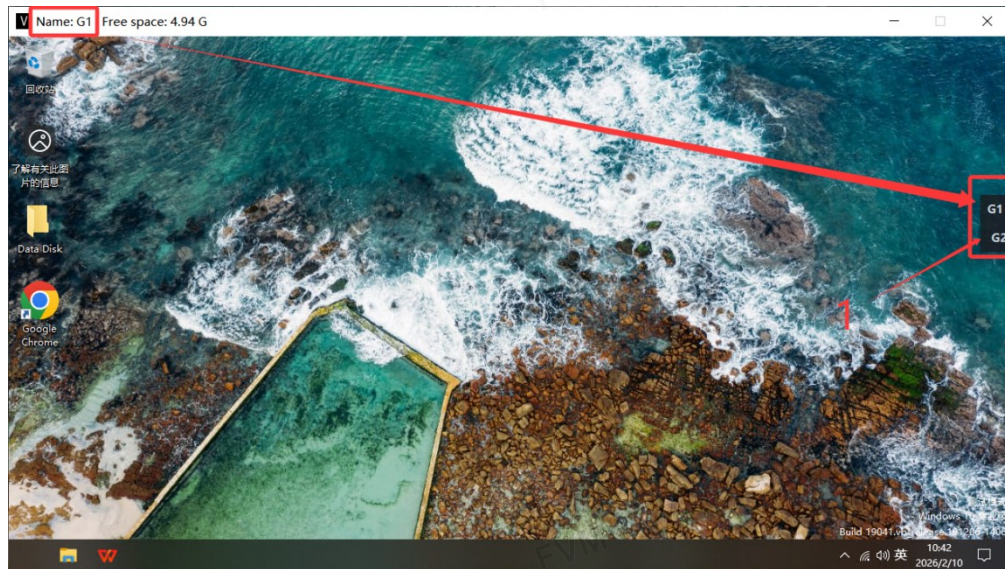

- Select the storage directory ('.lnk' will default to the client desktop, and other files will default to the 'Data Disk' directory).

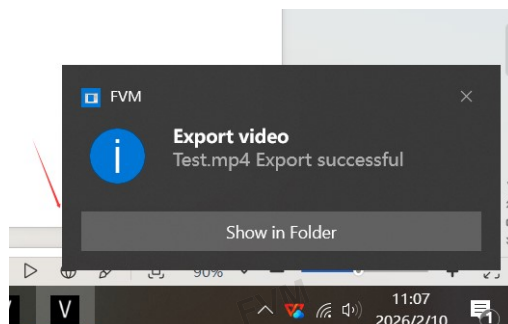

6. How to switch client machines(G1<->G2)

- Click on the switch bar on the right and select the corresponding client

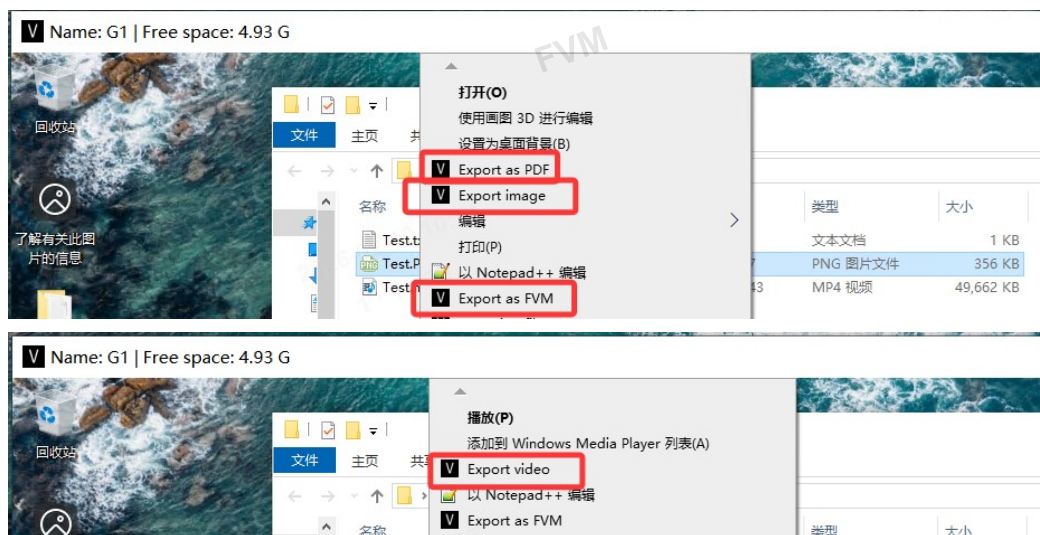

7. How to view exported files

- Right click on the FVM tray -->click on **view Exported Files**
- Prompt for successful file export -->Click **Show in Folder**

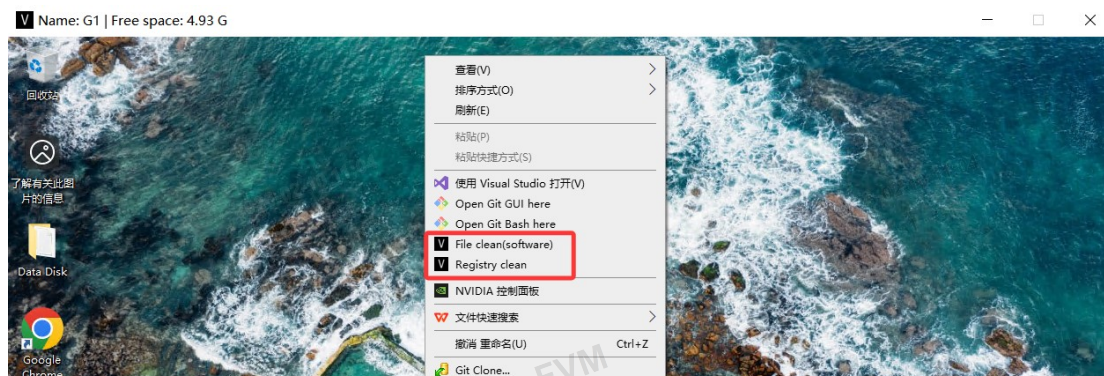

8. How to export client files for easy file flow

- **Select the file, right-click, and a menu item will pop up**[The exported file will be marked with a dark watermark for easy tracking Traceability, Files with visible watermarks cannot be removed, even if dragged into the client machine]
- **Export as FVM**,FVM files can only be recognized by the client. Using different client machines through the external host Network communication can only be used within the client machine. It needs to be dragged to the client again before it can be used again.
- **Export as PDF**, The exported PDF file is encrypted, can only be read, cannot be modified, printed, etc., and will have a visible watermark added. The encryption status needs to be released, and it needs to be dragged to the client again to be modified.
- **Export image**, The exported image file will have a clear watermark added
- **Export as video**, The exported video file will have a clear watermark added

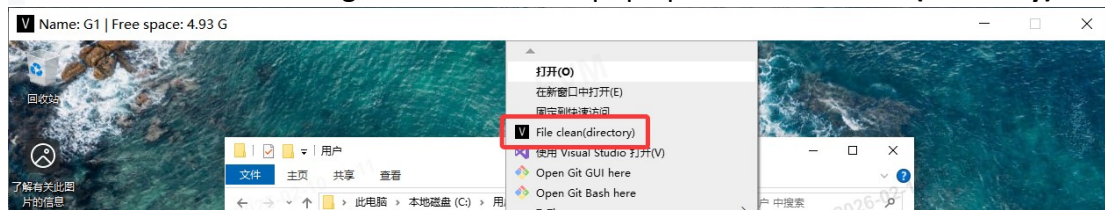

9. Cleaning up dirty data on client machines

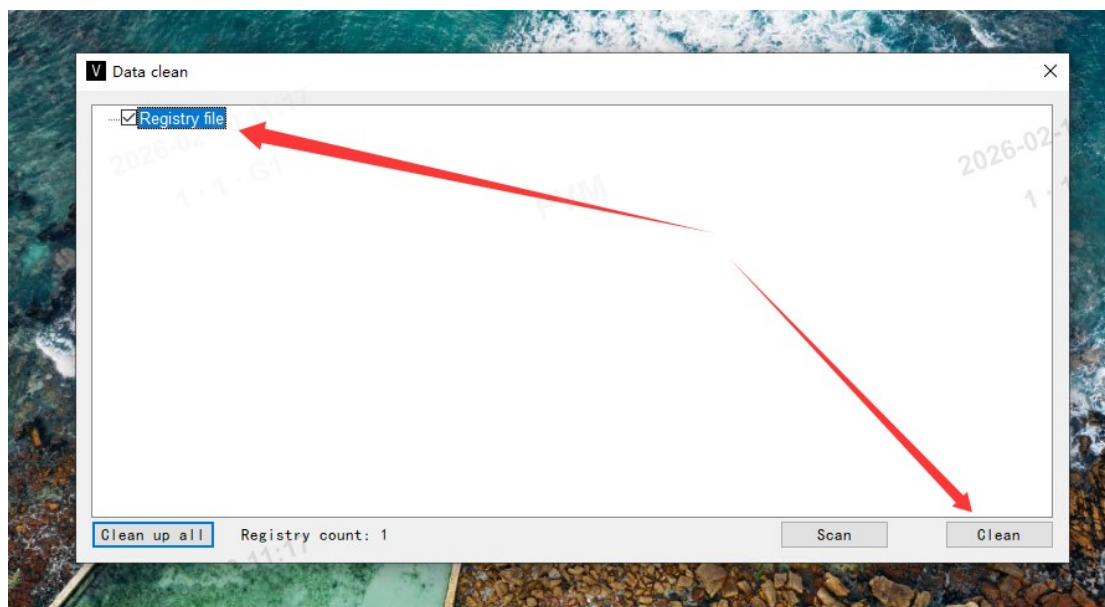

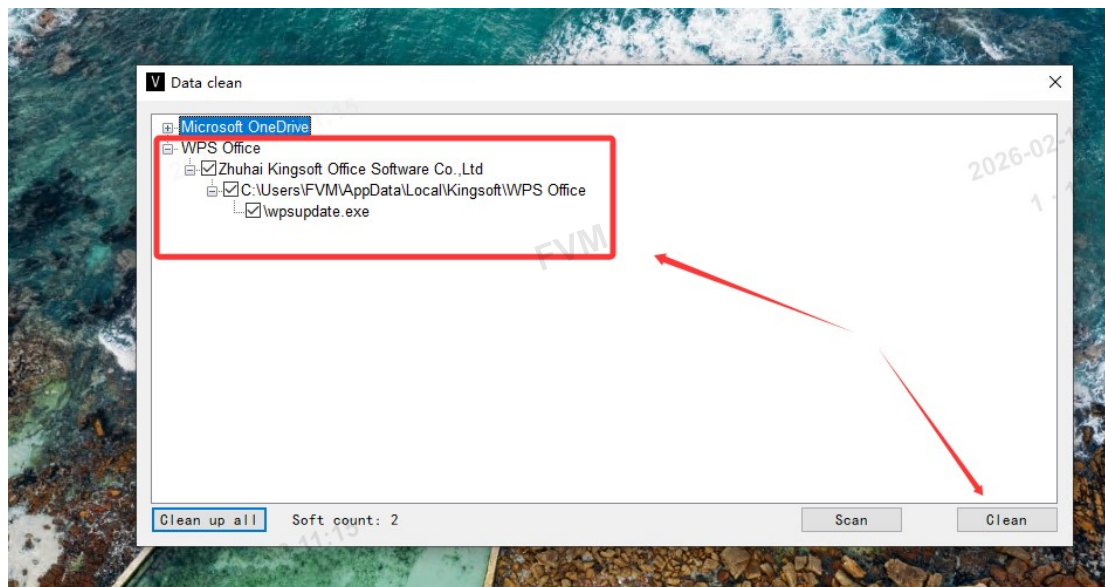

- Suitable for cleaning dirty data when software compatibility issues occur.
- Right click on the desktop, a right-click menu will pop up -->click **File clean(software)** or **Registry clean**

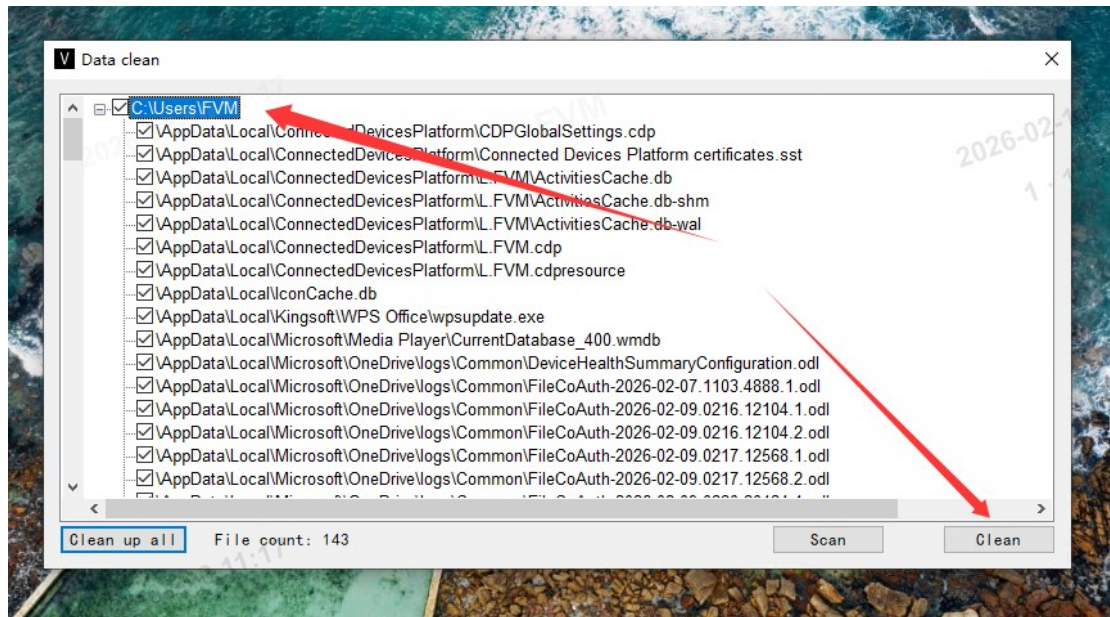

- Select the folder and a right-click menu will pop up -->click **File clean(directory)**

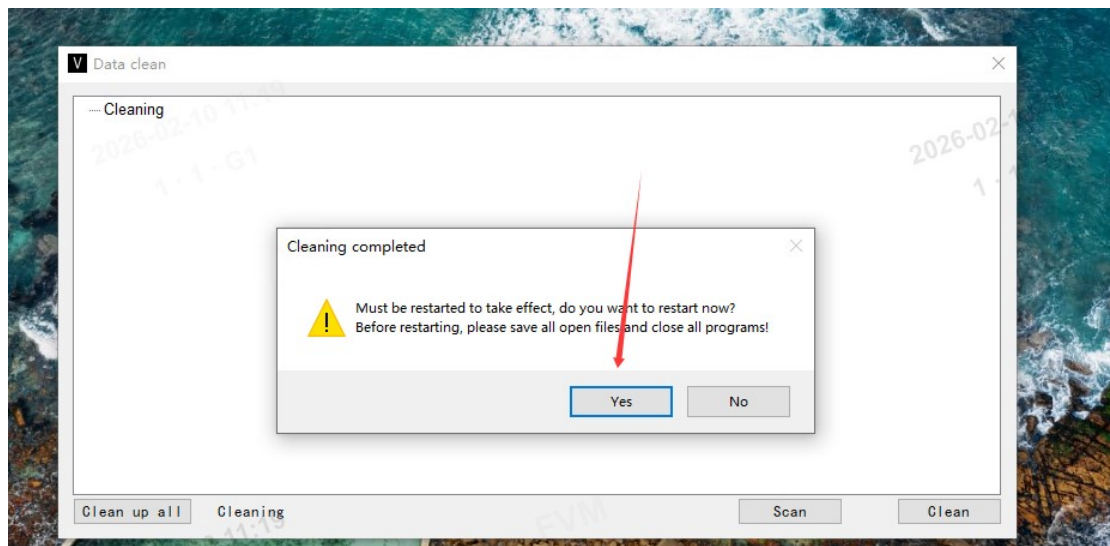

- Select the software, registry, or file that needs to be cleaned -->click **Clean**
- Rescan -->Click **Scan**
- Select All -->Click **Clean up all**

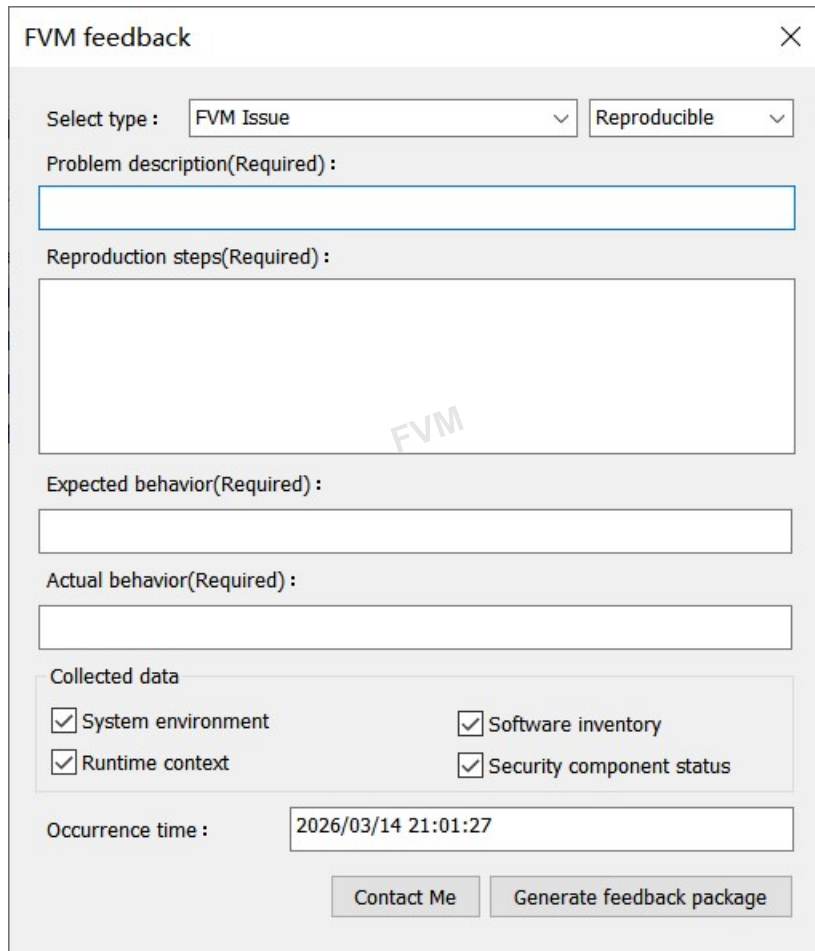

- Restart the client to completely clean up, click Yes

10. Feedback

- Right click on the FVM tray -->click on **Feedback**
- Make it easy for you to tell us what happened to the software and help us fix it as soon as possible.

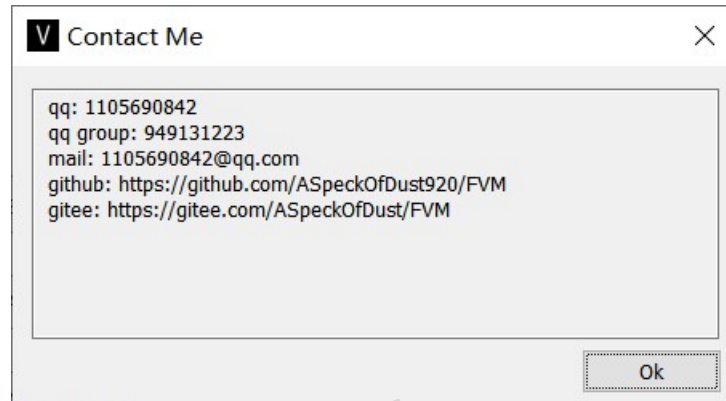

The screenshot shows a 'FVM feedback' dialog box with a close button (X) in the top right corner. The form contains the following fields and controls:

- Select type :** A dropdown menu with 'FVM Issue' selected.
- Reproducible :** A dropdown menu with 'Reproducible' selected.
- Problem description(Required) :** A text input field.
- Reproduction steps(Required) :** A large text input area.
- Expected behavior(Required) :** A text input field.
- Actual behavior(Required) :** A text input field.
- Collected data :** A section with four checkboxes, all of which are checked:
 - ☒ System environment
 - ☒ Software inventory
 - ☒ Runtime context
 - ☒ Security component status
- Occurrence time :** A text input field containing '2026/03/14 21:01:27'.
- Buttons:** 'Contact Me' and 'Generate feedback package' at the bottom right.

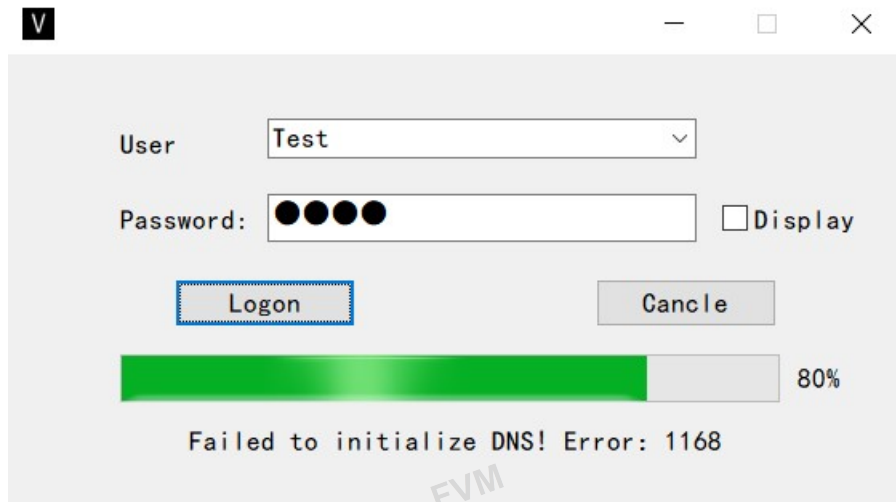

- **Select type:** FVM Issue,Compatibility Issue,Security Issue,Performance Issue, Feature Request,Other Issues. And whether it is reproducible or intermittent.
- **Problem description:** Tell us in concise language what happened.
- **Reproduction steps:** Please provide a detailed explanation on how to handle this issue. List according to steps 1, 2, 3.
- **Problem description:** Tell us in concise language what happened.
- **Expected behavior:** Please describe to us what you had expected to be the correct outcome.
- **Actual behavior:** Describe the actual results that occur and compare them with the expected behavior.
- **Upload credentials:** Put the error screenshots, recorded videos, related software installation packages, log files, etc. into the designated directory, and the system will automatically collect them. These materials can help technicians quickly reproduce problems and accurately locate the root cause.

- **Occurrence time:** The time point of the problem occurrence is convenient for technical personnel to locate based on the logs.
- **Contact Me:** You can provide feedback on issues or suggestions encountered through this channel

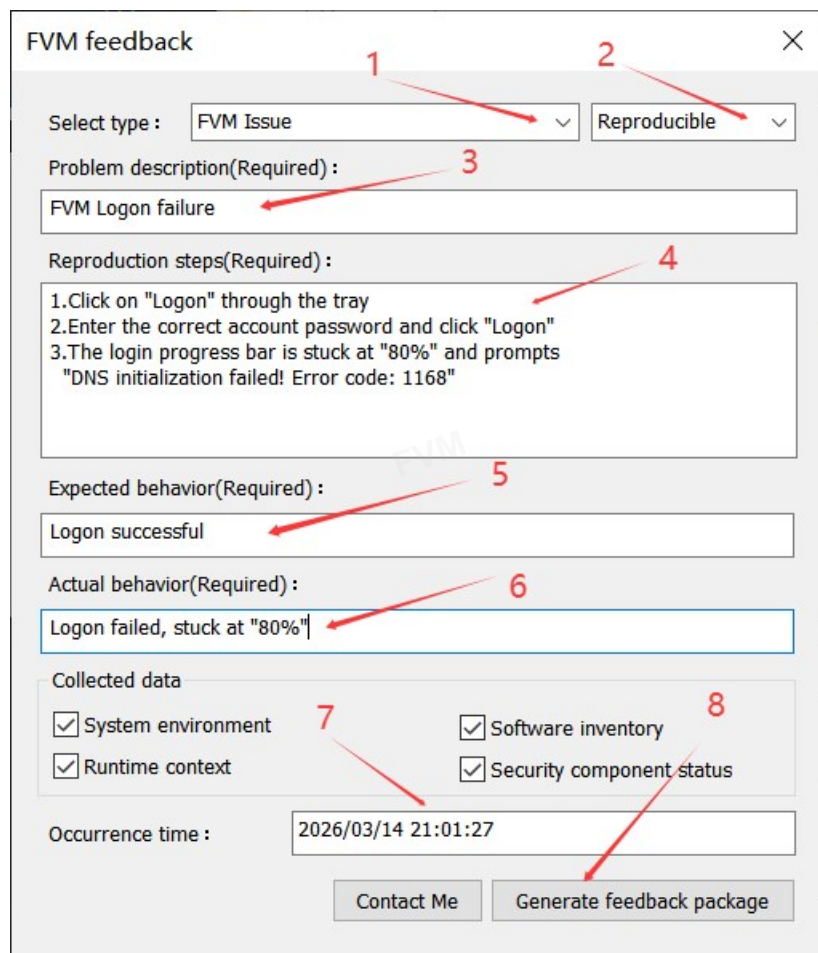

- Example of problem feedback (logon failure)

1. Logon failure detected:

A screenshot of a logon window. At the top, there is a 'User' dropdown menu with 'Test' selected. Below it is a 'Password' field with four black dots and a 'Display' checkbox. There are two buttons: 'Logon' and 'Cancel'. A green progress bar is shown at 80%. Below the progress bar, the text 'Failed to initialize DNS! Error: 1168' is displayed.

2. Right click on the FVM tray --> click on **Feedback** --> Input feedback information:

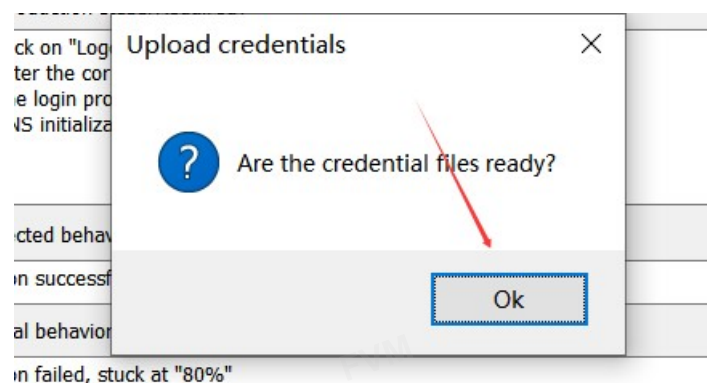

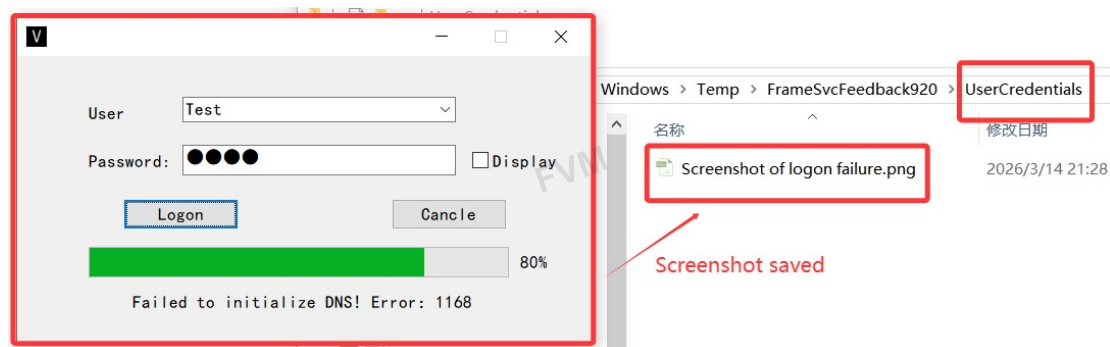

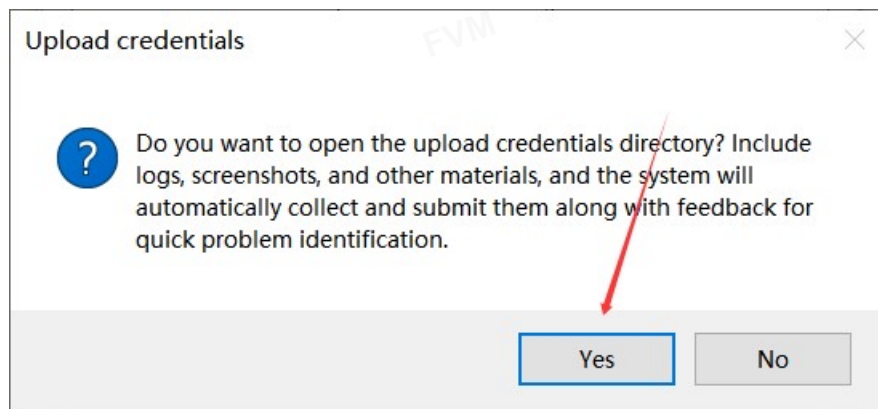

A screenshot of the 'FVM feedback' form. It contains several fields and checkboxes, with red arrows and numbers 1 through 8 pointing to specific elements:

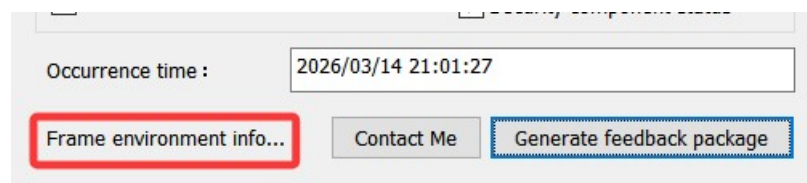

- 1: Points to the 'Select type' dropdown menu, which is set to 'FVM Issue'.
- 2: Points to the 'Reproducible' dropdown menu, which is set to 'Reproducible'.
- 3: Points to the 'Problem description(Required):' text box, which contains 'FVM Logon failure'.
- 4: Points to the 'Reproduction steps(Required):' text box, which contains a list of steps: '1. Click on "Logon" through the tray', '2. Enter the correct account password and click "Logon"', '3. The login progress bar is stuck at "80%" and prompts "DNS initialization failed! Error code: 1168"'. The number 4 points to the third step.
- 5: Points to the 'Expected behavior(Required):' text box, which contains 'Logon successful'.
- 6: Points to the 'Actual behavior(Required):' text box, which contains 'Logon failed, stuck at "80%"'.
- 7: Points to the 'Collected data' section, which has four checkboxes: 'System environment', 'Runtime context', 'Software inventory', and 'Security component status'. All are checked.
- 8: Points to the 'Occurrence time' text box, which contains '2026/03/14 21:01:27'.

At the bottom, there are two buttons: 'Contact Me' and 'Generate feedback package'.

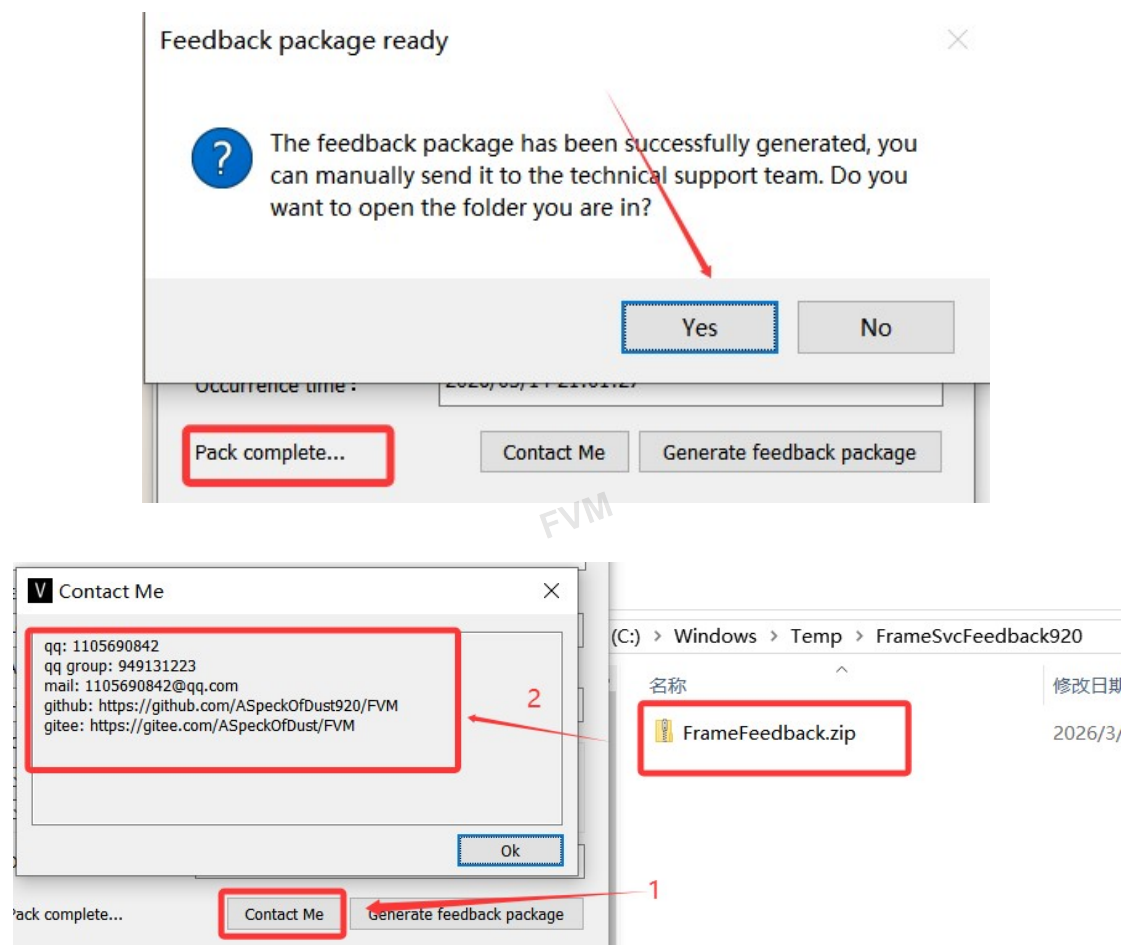

3. Click on **Generate feedback package** --> **Upload credentials** (Screenshot of logon failure) --> Confirm that the credential files are ready

4. Please be patient and wait for **the feedback package to be generated**, which may take 1-2 minutes.

5. Open the directory where the feedback package is located, and then send the feedback package to the FVM technical team (group chat, private chat, email) according to the contact information, waiting for a reply.

6. The FVM technical team will follow up on problem handling. If the problem cannot be reproduced, a **remote environment** may need to be provided for **remote problem localization**.

11. FVM beta version

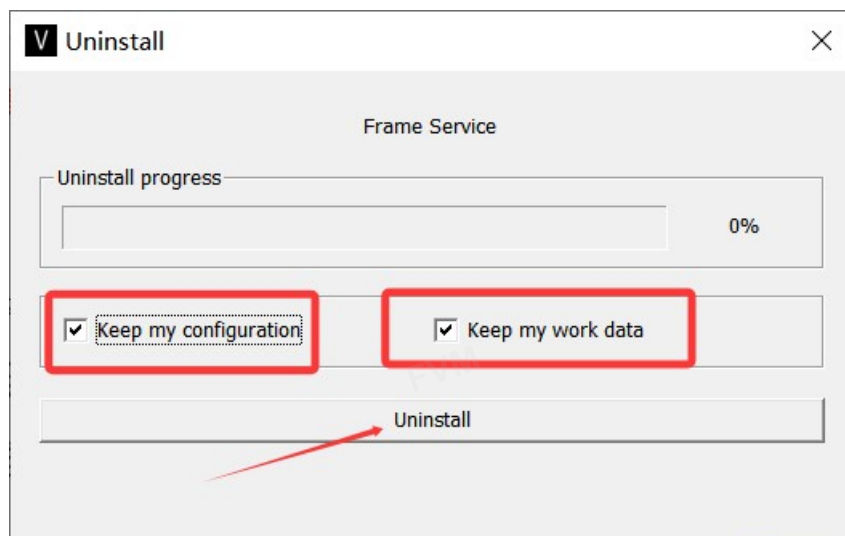

- Provide limited data isolation and security protection: host cannot access client data, clients are isolated from each other Screen protection, watermark and screenshot protection.
- Does not have the ability to finely control the processes of the host, client, or protected processes through policies Audit and data collection.
- Only three clients are provided, and multiple instances are restricted.
- Not equipped with cloud desktop virtual applications, unable to provide simultaneous connection and operation of multiple thin terminals.
- Only applicable to user groups in simple scenarios.

12. Uninstall

- Settings --> Apps and Features --> Select FrameSvc920 --> Click Uninstall.

- By default, the configuration and client work data are retained, and users have full control, Choose to keep or delete, **once deleted, it cannot be restored.**

Wishing you a pleasant journey!
